Full Stack Developer with 10+ years of experience building secure, scalable web platforms from legacy systems to cloud deployments and hybrid Infrastructure. Main developer on 4 major SaaS products and contributor to 8+ internal and client platforms. Worked on 200+ WordPress and Shopify websites, specializing in store setup, product configuration, customization, payment/CRM integrations, WooCommerce, migrations, and security.

Strong in PHP, Laravel, Vue.js, React.js, Node.js, APIs, JavaScript, MySQL, HTML5, and CSS3. Experienced working independently and in Agile teams of up to 10, with experience mentoring junior developers.

CERTIFICATIONS / AWS

- AWS Certified Solutions Architect – Associate — Amazon Web Services, October 02, 2025
- AWS Certified Cloud Practitioner — Amazon Web Services, May 2024

EXPERIENCES:

Nov 2025 - Present

SENIOR FULL STACK DEVELOPER / Company: FIRST PAGE

- Own and maintain **Sentr**, an internal React and Laravel platform running on **AWS EKS** with multi-region deployment and autoscaling. Does task management like Jira and Asana, I contributed in that also worked on processes related to scheduling and client management area.
- Working experience from Cloudflare security, to dns configuration, name servers, setting up ai templates with Cloudflare workers, migrating ai templates setting up integrations using make.com, Zapier and n8n.
- I also Build micro applications using Claude code and deploy them for automated **financial, SEO related, and Client Platforms** based on the requirements provided.

- Implemented an **AI-assisted SMS payment recovery flow**, automating client follow-ups for pending payments.
- Maintain high-revenue **WordPress and Shopify e-commerce sites**, including UI, product pages, checkout, promotions, and third-party integrations. also work with Drupal and Magento based stores.
- Migrate and set up new WordPress and Shopify sites from Framer, Lovable, Magento, and custom platforms, while resolving urgent production issues where downtime directly impacts sales and revenue.
- Maintain **GitHub CI/CD pipelines** and reliable deployments to AWS EKS with rollback capabilities.
- Work directly with clients, developers, and stakeholders to scope requirements and explain technical solutions.
- Lead and mentor **2 junior developers** through code reviews and technical guidance.

July 2024 – Nov 2025

PRINCIPAL WEB DEVELOPER / Company: KING DAVID SCHOOL

- Designed and deployed a new school portal using Angular and Symfony, used daily by 150+ staff. For generating reports, sending emails internal and to Parents, also payment pages for the events during the year term.
- Secured the portal API with TOTP two-factor authentication, rate limiting, and IP/user-level blocking was implemented for Better Security.
- Implemented GitHub Actions CI/CD pipelines, improving release speed and reducing deployment errors.
- Integrated Veracross, Synergetic LMS and School box APIs to combine student, staff and timetable data into one interface.
- Managed the school's main website on AWS EC2, with the portal and other applications hosted on internal Kubernetes infrastructure. I was responsible for the hybrid infrastructure handling.

Mar 2022 – July 2024

PHP DEVELOPER / Company: GO MARKETS

- Rebuilt MIS, the accounting and trading reporting platform, from a legacy PHP application into a secure React and Laravel and NodeJS microservice platform used across multiple departments.
- Built trading activity reporting directly from MT4 and MT5 servers (Trading Platform API), including financial data used for ASIC reviews. Based on requirements of finance department.

- Developed applications report generation and access control, integrating Auth0, Zoho, internal microservices and payment gateways. Integrated payment gateways including PayPal, Stripe, Checkout.com, After pay, Zip, Skrill and Worldpay.
- Improved financial reporting performance by 30% through SQL optimization, stored procedures, triggers and indexing.
- Reduced deployment times by 50% by implementing CI/CD on AWS.
- Migrated the platform from internal servers to AWS Kubernetes in collaboration with another senior cloud engineer.
- Mentored 2 junior developers through code reviews and technical guidance.

Aug 2019 – Mar 2022

LARAVEL DEVELOPER / Company: SOUPED UP SOLUTIONS

- Gained work experience in Working with Catering based software Made with Laravel and VueJS microservice architecture.
- Worked on a CakePHP project to migrate the existing catering application over to Laravel.
- Mainly creating adding new functionality in the app, I create document on Jira backing up the functionality so team can refer to. Worked in agile sitting.
- I Used technologies such as Laravel, Typescript, VueJs, JavaScript, Git, OOP PHP etc. Application was well cover with Unit tests for the application to improve debugging process.
- Developed Custom Api's to work with in house application. Kept and maintained Postman API collections.
- I Handled work load and dealt with Hot fixes as the required to be fixed urgently. Worked through local, UAT, staging and Production environments.
- I Used SonarQube for coding standard, app wise same code practices were used by all developers.
- I wrote code that can be used more than once with well written comments and instructions to other developer backed up with unit test.
- Usage of Agile environment, GitHub actions, Git version Control also Linux command line.
- I discuss task requirements and best practices with team and deliver tasks before deadline.
- Use to work in 2weeks sprints and major release every 3rd month or releases or urgent fixes as hot fixes.

MAR 2018 – OCT-2018
